

Torca UniStrap

The UniStrap is a simple, multifunction unitized clamp and bracket clamping system for effectively mount or suspend exhaust system components. The exclusive design utilizes the tensile strength of the band to maximize clamp load while minimizing assembly weight. Brackets are application and customer specific and may not be available for sale with band clamp system.

- Application specific designs, sizes
- Reduce part number complexity
- Increases assembly ease and reliability
- More strength, less materials
- Customer specific sizes and configurations are available

- 1 Mechanically joined "stirrups" with contained nuts provides attachment for shields
- 2 Available in Aluminized Steel, 409 Stainless Steel and 430 Stainless Steel
- 3 Application specific, low mass brackets are engineered for mounting strength and ease of system assembly
- 4 The clamp band is positioned behind the bracket, pulling the mounted mass tightly into secured position
- 5 Plated, high-strength, pre-attached English or Metric hardware
